Education

Delhi Technological University

B.Tech Computer Science 9.18 CGPA

New Delhi, IN

2023–2027

Lawrence Public School

Senior Secondary Education with Science Major Percentage: 94.4

New Delhi, IN

March 2022

Lawrence Public School

Class 10th Percentage: 95.2

New Delhi, IN

March 2020

Experience

Teaching Assistant

Coding Ninjas

New Delhi, IN

October 2023 - December 2023

- Mentored and guided over 50 students in mastering Java programming and Data Structures & Algorithms, designing and assigning complex problems for monthly assessments to strengthen their coding skills.
- Provided guidance and constructive feedback that led to improvement in students' assessment performance and overall skill development.

Projects

Enterprise RAG System

React.js, Tailwind CSS, Java Spring Boot 3.x, LangChain4j, PostgreSQL, pgvector

- A full-stack application that allows users to securely upload massive PDF documents and query them in natural language. The system will use vector search to retrieve only the relevant paragraphs and feed them to an LLM to formulate an answer.
- Implemented an asynchronous data ingestion pipeline with an overlapping chunking strategy and PostgreSQL with pgvector for efficient mathematical similarity searches.

AI Powered Mock Interview

React.js, Tailwind CSS, Java Spring Boot 3.x, LangChain4j, PostgreSQL

- A highly interactive platform where users can upload their resume, provide a target job description, and undergo a dynamic, AI-driven mock interview.
- Integrated the browser's native Web Speech API to add a microphone feature, allowing users to speak their answers instead of typing, while the AI instantly grades their responses and provides a scorecard.

Nutridel

React.js, Tailwind CSS, Java Spring Boot 3.x, PostgreSQL

- A food delivery platform that acts as a personal nutritionist. It doesn't just list food; it understands the nutritional content of every menu item and recommends meals based on user's specific biological data and goals using LLM.
- Implemented a context-aware AI chatbot using Retrieval-Augmented Generation (RAG) and vector embeddings to recommend optimal menu items based on a user's remaining daily calorie budget.

Skills

Languages: Java, C++, Python, JavaScript

Frameworks & Libraries: React.js, Spring Boot, LangChain4j, Tailwind CSS, HTML, CSS

Databases: PostgreSQL, pgvector

Concepts: Data Structures & Algorithms, Retrieval-Augmented Generation (RAG), LLM Integration, Problem Solving

Development Tools: Visual Studio Code, IntelliJ IDEA

Certifications

Data Structures in Java - Coding Ninjas

July 2023–Nov 2023

Interests

- Travelling, Listening to Music, Playing Indoor/Outdoor Games
