Education

Delhi Technological University

B.Tech Computer Science 9.18 CGPA

New Delhi, IN

2023–2027

Lawrence Public School

Senior Secondary Education with Science Major Percentage: 94.4

New Delhi, IN

March 2022

Lawrence Public School

Class 10th Percentage: 95.2

New Delhi, IN

March 2020

Projects

Biteprints

React.js, Tailwind CSS, AWS Lambda, Amazon DynamoDB, Python, Azure OpenAI

- A serverless health and nutrition ecosystem that integrates AI-driven recipe generation, external delivery macro-estimation, and metabolic activity tracking into a unified telemetry dashboard.
- Architected an event-driven backend using AWS Lambda and DynamoDB for persistent cross-module data syncing, and engineered an Azure OpenAI pipeline to dynamically formulate optimized daily schedules and estimate nutritional metrics.
- Developed a mobile-friendly UI with Tailwind CSS and built a custom dark/light mode toggle, ensuring an optimal viewing experience tailored to user preferences.

Enterprise RAG System

React.js, Tailwind CSS, Java Spring Boot 3.x, LangChain4j, PostgreSQL, pgvector

- A full-stack application that allows users to securely upload massive PDF documents and query them in natural language. The system will use vector search to retrieve only the relevant paragraphs and feed them to an LLM to formulate an answer.
- Implemented an asynchronous data ingestion pipeline with an overlapping chunking strategy and PostgreSQL with pgvector for efficient mathematical similarity searches.
- Utilized Apache PDFBox to parse complex PDF documents, extracting and splitting raw text into structured chunks for AI processing.

AI Powered Mock Interview

React.js, Tailwind CSS, Java Spring Boot 3.x, LangChain4j, PostgreSQL

- A highly interactive platform where users can upload their resume, provide a target job description, and undergo a dynamic, AI-driven mock interview.
- Integrated the browser's native Web Speech API to add a microphone feature, allowing users to speak their answers instead of typing, while the AI instantly grades their responses and provides a scorecard.
- Processed uploaded PDF resumes using LangChain4j and sent the extracted text to the Gemini AI to automatically generate personalized, role-specific questions.

Skills

Languages: Java, C++, Python, JavaScript

Frameworks & Libraries: React.js, Spring Boot, LangChain4j, Tailwind CSS, HTML, CSS

Databases: PostgreSQL, pgvector

Concepts: Data Structures & Algorithms, Problem Solving

Development Tools: Visual Studio Code, IntelliJ IDEA

Certifications

Data Structures in Java - Coding Ninjas

July 2023–Nov 2023

Interests

- Travelling, Listening to Music, Playing Indoor/Outdoor Games
